

## COLORSMART® DEMONEYE V2 LED HEADLIGHT KITS

# DEMONEYE®

**SKU: -CARGBV2**

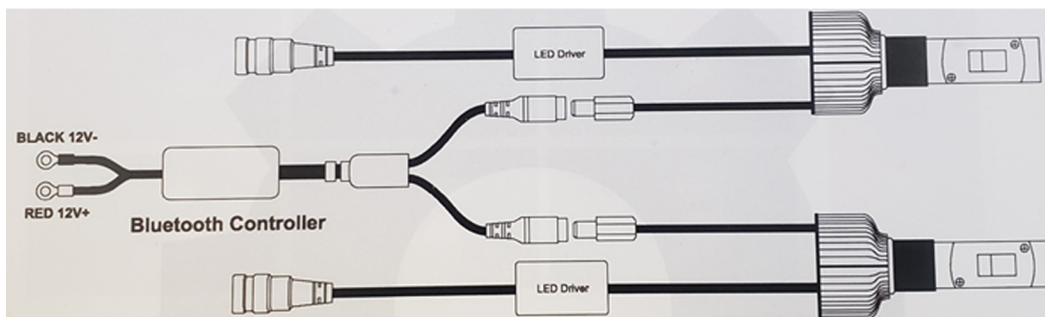

### KIT INCLUDES:

- (2) LED BULBS WITH RGB DEMONEYE FUNCTIONALITY
- (1) DEMONEYE RGB CONTROLLER
- (1) ALLEN WRENCH

### INSTRUCTIONS:

1. Bench test the kit to ensure proper functionality before installing. As shown in the diagram below, plug all units together and connect them to your Bluetooth controller. Connect the RED wire to the POSITIVE pole of the vehicle's battery, and the BLACK wire to the NEGATIVE pole. Power on the car's battery and test all lights. The RGB LED's on both sides should light up. If you experience any issues, please contact your place of purchase. If everything is working as it should, continue to Step 2.

2. Disconnect the battery from the vehicle.

3. Apply dielectric grease to all connections. This prevents any moisture from entering connection points.

4. Remove high beam, low beam, or fog light bulbs and replace them with your new LED bulbs.

Please check your state and local laws before installing this headlight kit. Every state has different policies and procedures in place regarding aftermarket vehicle accessories. Race Sport Lighting is not responsible for any fines that you may receive while using this kit.

5. Plug bulb connections into your factory wiring or into required interface solution.  
(vehicle dependent)
6. Mount drivers out of the way of moving parts or excessive heat.
7. Power on your headlights to ensure a proper installation. Using a white wall, you can adjust the LED light pattern by loosening the Allen wrench provided for best light pattern. Tighten the Allen screw when finished.

8. Connect the RGB portion of the LED onto the Bluetooth controller. Before securing the controller, use the QR codes on the controller to download the app (BLEDIM). Mount your controller in a convenient location, out of the way of moving parts and excessive heat. Connect to your desired power source, either straight to the battery or the ignition of the vehicle. We recommend wiring a switch to be able to control the RGB with either power source.
